

NGUYEN MINH TRUNG

AI ENGINEER

✉ trung.nguyenminh7804@gmail.com

☎ (+84) 352 279 159

🔗 nmihtrug.github.io

📍 District 9, Ho Chi Minh City

I am a third-year Artificial Intelligence major at FPT University in Vietnam, with a solid foundation in mathematics and computer science. My passion for AI and Machine Learning inspires my ambition to continuously learn, create, and tackle tough challenges. I am committed to developing cutting-edge solutions that make a lasting influence on the industry, combining my technical knowledge with a forward-thinking approach. I am dedicated to lifelong learning and actively seek collaboration with professionals and researchers to further develop my knowledge and abilities, contributing meaningfully to the advancement of modern technology.

EDUCATION

FPT University, Viet Nam

08/2022 - Present

- Major: Artificial Intelligence
- 70% Tuition scholarship
- Current GPA: 3.55/4.0

UOW Malaysia KDU Penang University College, Malaysia

02/2023 - 03/2023

- English Enhancement Programme

WORKING EXPERIENCE

Viet Dynamic Company 🔗

01/2025 - 04/2025

AI Engineer Intern

- Developed 3D surface reconstruction algorithms for robotic binning applications.
- Optimized models using ONNX and TensorRT for improved performance and efficiency.

AI Technology and Application Research Lab 🔗

09/2023 - Present

AI Researcher

- Conducted advanced research in knowledge distillation algorithms and large language models (LLMs), including generative AI applications.
- Developed innovative solutions for federated learning, knowledge distillation, and generative AI.
- Explored and applied knowledge distillation techniques to improve model efficiency

RESEARCH EXPERIENCE

Enhancing Speech Emotion Recognition through Knowledge Distillation

06/2024 - 09/2024

<https://doi.org/10.1109/ictc62082.2024.10826904>

- Researched Speech Emotion Recognition (SER) with a focus on improving model efficiency and accuracy using knowledge distillation techniques.
- Conducted extensive experimentation, achieving a 40% improvement in inference time while reducing computational cost by 45%.

PROJECTS

Hospital System Chatbot10/2024 - 01/2025

https://github.com/nmihtrug/Hospital-System-Chatbot

- Developed a chatbot for a simulated hospital system, integrating structured and unstructured data retrieval.
- Designed and implemented a Neo4j AuraDB graph database, reducing query time by 40% compared to traditional relational databases.
- Built a Retrieval-Augmented Generation (RAG) chatbot capable of fetching structured and unstructured data, increasing information retrieval accuracy.
- Deployed the chatbot using FastAPI and Streamlit for real-time accessibility and usability.
- **Technical Skills:** LangChain, Neo4j, RAG, FastAPI, Streamlit, API Integration, Docker.

HONORS & AWARDS

- **Third Prize** at Scientific Research Competition Fall 2024 Semester, FPT University.12/2024
- **Top 5 Excellent Teams** at Blockchain Solana Bootcamp At FPTU, Superteam Vietnam.07/2024
- **Top 100 Outstanding Students** of Spring and Fall 2024 Semester, FPT University.03/2023
- **70% FPT University tuition scholarship.**08/2022
- **Third Prize** in the Computer Science category for the 12th-grade Excellent Student Competition in Ba Ria-Vung Tau Province.04/2022

CERTIFICATIONS

Natural Language Processing Specialization	03/2025
DeepLearning.AI	
Deep Learning Specialization	10/2024
DeepLearning.AI	
Software Development Lifecycle Specialization	05/2024
University of Minnesota	
AI Foundations for Everyone Specialization	11/2023
IBM	

SKILLS

Programming	C, C++, Python
Languages	Vietnamese (native), English (intermediate), Japanese (basic)
Technical	Deep Learning, Natural Language Processing, Computer Vision
Tools	Pytorch, Langchain, Git, Neo4j, RAG, FastAPI.
System	Linux, Docker, Embedded systems
